

Sunbelt PM System V1

Executive Summary Report

Prepared by	Matthew McDaniel
Email	matthew.mcdaniel@sunbeltmodular.com
Date	January 17, 2026
Audience	Devin Duvak & Candy Juhnke
Purpose	Demonstrate transformative value and secure company-wide adoption

Mission Statement

Sunbelt-PM-System is a unified platform that streamlines modular construction workflows across sales, project management/operations, and production at Sunbelt Modular, integrating shared real-time data and advanced analytics—such as efficiency tracking, personnel metrics, and factory dashboards—to eliminate silos, boost company-wide performance, and enable data-driven insights for trends, forecasting, and continuous improvement.

The Problem We're Solving

Current State	Impact
Praxis handles estimating/accounting only	No visibility into project execution
Sales handoffs via email/PDF	Re-entry errors, delayed updates

Current State	Impact
No central project tracking	Missed deadlines, lost information
Factory operations are siloed	No real-time production visibility
Manual crew tracking	Inefficient labor utilization
No quality metrics	Reactive vs. proactive QC

Result: Time wasted, increased delays, limited growth potential across 14 factories.

The Solution: A Complete Operational Platform

Built in-house using modern technology (React + Supabase), this system doesn't replace Praxis—it **extends** it into full project lifecycle management with production tracking, crew management, and quality control.

Cost Comparison

Solution	Monthly Cost (100+ users)
Procore	\$5,000 - \$15,000/month
Monday.com	\$2,000 - \$5,000/month
Asana Business	\$1,500 - \$4,000/month
Sunbelt PM System	~\$50/month hosting

What is Built: Complete Feature Overview

Role-Specific Dashboards (5 Total)

Dashboard	User Role	Key Capabilities
VP Dashboard	Executive Leadership	Enterprise portfolio view, sales pipeline, factory performance, top clients, delivery trends
Director Dashboard	Directors, Senior PMs	Portfolio health, PM workload analysis, project timeline (Gantt), risk tracking, incoming quotes
PM Dashboard	Project Managers	Personal command center, my tasks/RFIs, calendar, urgent deliveries, active projects
Plant Manager Dashboard	Factory Managers	Production line, crew management, quality control, analytics, scheduling
PC Dashboard	Project Coordinators	Factory projects, deadlines, overdue items, warning emails

Dashboard Details

VP Dashboard - Enterprise View

Portfolio Metrics:

- Total portfolio value across all factories
- Active project count and on-time delivery percentage
- Overdue items requiring attention
- Portfolio health breakdown (On Track / At Risk / Critical)

Sales Pipeline Visibility:

- Pipeline value and weighted forecast
- Win rate calculations
- PM-flagged quotes needing attention

- Recently converted quotes (last 30 days)
- 30/60/90 day forecast buckets

Strategic Insights:

- Factory performance comparison
- Top clients by contract value
- Upcoming deliveries (60-day horizon)
- 6-month completion trends

Director Dashboard - Portfolio Command

Portfolio Health:

- Health at a glance (On Track / At Risk / Critical)
- All projects with health indicators
- Building type breakdown (Custom, Fleet, Government)

PM Workload Analysis:

- Projects per PM with difficulty weighting
- Visual load bars (overloaded/balanced/available)
- Incoming opportunities (95%+ outlook quotes)

Timeline View:

- Gantt-style project timeline
- Upcoming deadlines (next 7 days)
- Attention/critical projects highlighted

PM Dashboard - Personal Command Center

My Work:

- My active projects, open tasks, open RFIs
- Overdue items (highlighted red)
- Due this week items

Calendar Integration:

- Weekly calendar view
- Color-coded by type (tasks, RFIs, submittals, milestones)
- Week navigation with today button

Delivery Tracking:

- Urgent deliveries (next 14 days)
- 30/60/90 day delivery timeline
- Building type and urgency indicators

Plant Manager Dashboard - Production Control

9 Functional Tabs:

Tab	Purpose
Overview	Stats grid, production preview, real-time metrics widgets
Production	12-station production line, module tracking, drag-drop movement
Calendar	Production scheduling with simulation mode
Crew	Attendance, weekly schedule, utilization, cross-training
Quality	QC stats, pending inspections, pass/fail records
Analytics	OEE, takt time, queue analysis, kaizen board
Pipeline	Auto-scheduling tools
Reports	Daily production report generation
Config	Plant settings and preferences

Production Metrics:

- Modules: Working / In Queue / Staged / Completed
- Crew present count

- Active projects in factory
- Bottleneck alerts (queue > 3 modules)

Crew Management:

- Clock in/out tracking with breaks
- Weekly shift assignments by station
- Utilization heatmaps
- Cross-training matrix (skills/certifications)

Quality Control:

- Pass/fail tracking with rates
- Pending inspection queue
- Defect cycle timing
- Quality trend analysis

PC Dashboard - Factory Operations

Key Metrics:

- Factory projects count
- Overdue items (highlighted)
- Due today / due this week counts
- Warning emails sent

Deadline Management:

- Upcoming deadlines (15 items, sorted by urgency)
- Click to navigate to project workflow
- Overdue section with red highlighting

Project Visibility:

- Factory projects table with status
- PM assignments
- Open task counts
- Search and filter capability

Mobile Applications (2 PWAs)

Floor App - Factory Workers

Target Users: Production workers, technicians, crew members

Feature	Description
Module Lookup	Search/scan modules by serial number, view status and location
Station Move	Transfer modules between stations with queue position
QC Inspection	Pass/fail inspections with defect codes
Inventory Receiving	Goods receipt and location assignment

Design: Dark mode optimized for factory floor, large touch targets, PIN-based login

Manager PWA - Supervisors

Target Users: Crew leaders, supervisors, factory managers

Feature	Description
Dashboard	Quick stats, project list, recent activity feed
Projects	Filterable project list with status and search
Project Detail	Tasks, RFIs, submittals, timeline, files, audit log
Tasks	All tasks with create/edit/complete capability
RFIs	All RFIs with create/edit capability
QC Summary	Daily stats, recent inspections, defect trends

Design: Mobile-optimized, offline support, real-time sync indicator

Project Management Features

Feature	Description
6-Phase Workflow	Interactive workflow with draggable stations and status lights
Task Management	Create, assign, track tasks with priorities and due dates
RFI Tracking	Request for Information with status workflow and exports
Submittal Management	Document submittals with approval tracking
Floor Plans	Upload plans with interactive coordinate markers
Calendar	Month/week/day views with color-coded deadlines
Document Management	File uploads with versioning and organization
Praxis Import	CSV/Excel import with ~40 field mappings

Production Management Features

Feature	Description
12-Station Production Line	Visual grid showing module distribution
Module Tracking	Serial number, status, project, queue position
Takt Time Tracker	Cycle time monitoring by station
Queue Time Monitor	Wait time analysis with bottleneck detection
OEE Calculator	Overall Equipment Effectiveness metrics
Visual Load Board	Module queue visualization
Kaizen Board	Continuous improvement idea tracking

Feature	Description
Defect Cycle Timer	Defect aging and root cause analysis

Crew Management Features

Feature	Description
Attendance Dashboard	Digital clock in/out, break tracking, absence management
Weekly Schedule	Shift assignments by worker and station
Utilization Heatmap	Station/skill efficiency visualization
Cross-Training Matrix	Skills and certifications tracking

Analytics & Reporting

Report Type	Description
Executive Reports	C-level KPI summaries and trends
Portfolio Performance	On-time delivery, budget variance
Resource Utilization	Labor hours by station
Quality Metrics	Pass rates, defect trends
Daily Production Report	Factory daily output summary
RFI/Submittal Exports	Excel exports with factory branding

Business Impact & ROI

Efficiency Gains

Area	Current	With System	Improvement
Sales-to-PM Handoff	2-4 hours	5 minutes	95% faster
Status Updates	Manual calls/emails	Real-time dashboard	Instant visibility
Crew Tracking	Paper timesheets	Digital clock in/out	Accurate labor data
QC Documentation	Paper checklists	Digital with photos	Audit-ready records

Projected Benefits

- **20-30% reduction** in project cycle time
- **15% improvement** in on-time delivery
- **Elimination** of duplicate data entry
- **Real-time** visibility across all 14 factories
- **Data-driven** decision making

Cost Savings

Item	Annual Savings
Avoided SaaS licensing	\$24,000 - \$60,000
Reduced re-entry labor	\$15,000 - \$30,000
Fewer delays/expediting	\$50,000 - \$100,000
Total Potential	\$89,000 - \$190,000

Praxis Integration

The system **complements** Praxis—not replaces it:

Praxis Handles	Sunbelt PM System Handles
Estimating	Project execution
Accounting	Task/RFI/Submittal tracking
Sales quotes	Production management
Cost calculations	Crew/attendance
Financial tracking	Quality control

Integration: CSV/Excel import with ~40 field mappings (quote number, building specs, costs, dealer info, etc.)

Sample Adoption Roadmap

Phase 1: Demo & Buy-In (This Week)

- Tuesday presentation with live demo
- Real data showcase
- Q&A and feedback collection

Phase 2: Pilot (Q1 2026)

- Deploy to 1-2 factories
- Train key users (1-hour sessions per role)
- Measure time savings and gather feedback
- Refine based on real usage

Phase 3: Rollout (Q2 2026)

- Company-wide deployment

- Full training program
- Praxis integration enhancements
- Mobile app expansion

Phase 4: Enhancement (Q3+ 2026)

- AI-powered insights
- Advanced analytics
- Third-party integrations
- Continuous improvement

Anticipated Questions

"How does this fit with Praxis?"

It's not a replacement. Praxis remains our estimating/accounting anchor. This system imports Praxis data and extends into PM and production—creating a unified view without duplicating effort.

"What are the cost savings?"

Avoids SaaS fees (\$24K-\$60K/year). Hosting is ~\$50/month. ROI from efficiency gains could pay for itself in weeks through reduced delays.

"How long to roll out?"

Pilot: 1-2 weeks post-demo. Company-wide: 1-2 months with phased training. Starts with simple imports from existing Praxis exports.

"Will this require training?"

Yes, but minimal: 1-hour sessions per role (sales for imports, PM for workflows, production for dashboards). Intuitive interface means quick adoption.

"What's the risk if it doesn't work?"

Low. Pilot in one factory first. Easy rollback to current processes. We own everything—no vendor dependencies.

"How secure is the data?"

Built-in row-level security (users see only their factory/role data), encrypted storage, JWT authentication. Full control—no external vendors.

"Can it scale to all factories?"

Yes—designed for 100-200+ users with auto-scaling. Supports 14 factories out-of-box with factory-based filtering.

Summary: What You're Getting

Category	Count	Examples
Dashboards	5	VP, Director, PM, Plant Manager, PC
Mobile Apps	2	Floor App (workers), Manager PWA (supervisors)
Project Features	8+	Workflow, Tasks, RFIs, Submittals, Floor Plans, Calendar
Production Features	8+	Takt Time, Queue Monitor, OEE, Kaizen Board
Crew Features	4	Attendance, Schedule, Utilization, Cross-Training
Analytics	5+	Executive Reports, Quality Metrics, Daily Reports
